

# The Galaxy Song

by Eric Idle

Just re-

member that you're standing on a planet that's e-volving,

revolving at nine-hundred miles an hour

That's orbiting at nineteen miles a second, so it's reckoned,

a sun that is the source of all our power.

Now the sun and you and me, and all the stars that we can see

are moving a million miles a day

In an outer spiral arm at forty thousand miles an hour

of the galaxy we call the Milky Way.

## Galaxy Song

Just remember that you're standing on a planet that's evolving  
And revolving at nine hundred miles an hour,  
That's orbiting at nineteen miles a second, so it's reckoned,  
A sun that is the source of all our power.  
The sun and you and me and all the stars that we can see  
Are moving at a million miles a day  
In an outer spiral arm, at forty thousand miles an hour,  
Of the galaxy we call the 'Milky Way'.

Our galaxy itself contains a hundred billion stars.  
It's a hundred thousand light years side to side.  
It bulges in the middle, sixteen thousand light years thick,  
But out by us, it's just three thousand light years wide.  
We're thirty thousand light years from galactic central point.  
We go 'round every two hundred million years,  
And our galaxy is only one of millions of billions  
In this amazing and expanding universe.

The universe itself keeps on expanding and expanding  
In all of the directions it can whizz  
As fast as it can go, at the speed of light, you know,  
Twelve million miles a minute, and that's the fastest speed there is.  
So remember, when you're feeling very small and insecure,  
How amazingly unlikely is your birth,  
And pray that there's intelligent life somewhere up in space,  
'Cause there's bugger all down here on Earth.
